Start-to-Finish Core Content Network Version Setting Up Book Components

After you have successfully installed Core Content Network Version on the server, you need to take a few more steps to add book components and make them available to learners. All this is done on the server.

NOTE: These steps need to be done in the order listed. If you leave out a step, learners will not be able to use their Start-to-Finish Core Content book.

1. Install the Start-to-Finish Core Content Network Version Book Components

The book components consist of the following:

- Core Content books (.pdf files)
- Identity.xml file
- Audio
- Video (not available for all books)
- Topic Dictionary files

    1. Insert the Core Content Network Version CD for the title you want to install in the CD drive.

    2. Accept the prompts on your screen by clicking **Next** on each installer screen.

    3. To complete the installation, click **Finish** (Windows) or **Quit** (Macintosh).

2. Restart the Network Central Service from the Administrative Console

After you install a book and its components, your learners will not be able to access anything until you re-boot.

- In the Administrative Console, CONFIGURE SERVER page, click **Restart Server**.

    NOTE: In most cases, this should work. Your system setup determines if you should restart using a different method. For additional options, see the **ReadMe** file on the Core Content Network Version CD.

3. Add Your License Information

1. In the Administrative Console, MANAGE LICENSES page, enter your license code key in the **Input License Code** field and click **Verify**.

2. If the license number is verified, click **Apply Changes**.

    If the license number is not verified, try again. If it does not work, call Technical Support at 800.889.5242.

    NOTE: You do not need to assign individual users; All Core Content Network Version titles are available to any learner on the server.
